# PULLER

# SAFETY AND USAGE INSTRUCTIONS

**Removing components may require very high forces. The use of a puller involves risks that should not be underestimated. Therefore great care must be observed and attention given to safety during each pulling process.**

- Prior to commissioning, read through the operating instructions thoroughly and obtain advice from the manufacturer's application consultancy service if anything is unclear.
- Before use, learn about the correct employment of the tool to be used, taking into account the safety measures required.
- Apply pullers securely and monitor the forces that occur during the pulling procedure. If there are signs of overloading for example stiffness - break off pulling procedure immediately and use a larger puller or if necessary another puller model.
- Check the application of force on spindle drives with a torque wrench and on pump-driven, hydraulic puller tools using a pressure gauge. Never exceed the torque and load information on manufacturers' nameplates, in operating instructions or tables.
- Do not use electrical or pneumatic force or impact wrenches to operate pulling tools.
- The use of an extension to increase the transferred torque on the active tool can lead to overload and thus to breakage.
- **Caution:** The load and torque details are to be determined in the laboratory with new pullers and pulling equipment under normal conditions of use. Wear and tear caused by use and unfavourable usage circumstances can negatively influence the values.
- **Important:** The performance capacity of a combination piece of equipment, such as a puller with a hydraulics system, always depends on the weakest element.
- During the pulling procedure, always cover the danger zone, puller/part to be pulled, with an accident protection tarpaulin, in order to avoid injuries.
- Warming up the component is one method of positively influencing the pulling procedure.  
**Caution:** In the process, the puller should never be warmed, as otherwise its strength characteristics can be negatively influenced.
- Check state of the puller tool prior to any use and immediately replace damaged, manipulated or worn parts.
- Keep spindle threads or traverses clean and well-oiled.
- Regular maintenance lengthens the lifespan of the equipment, protects against accidents and ensures that the puller tool is ready for use.
- Make no alterations whatsoever to the puller tools. Any alteration may lead to dangerous consequences for the operator and automatically results in the expiry of the guarantee claim.
- In accordance with the UVV (Accident Prevention Regulations) or country-specific legislation, always wear prescribed personal protective equipment such as safety shoes, helmet, protective goggles, gloves, etc.

# PREVENTIVE ACCIDENT PROTECTION MEASURES

## Accident protection tarpaulin covers

During pulling work there are typically very powerful forces which can jerk components loose or even cause parts to break off or splinter from the pulling object. Parts flying around out of control represent a potential danger to the life and limb of the operator. Our accident protection tarpaulins were developed to effectively eliminate this danger.

The tarpaulins consist of particularly highly-elastic, tear-resistant and oil-resistant special material and will be tautened prior to the pulling procedure around component and puller.

To ensure that it is still possible to properly monitor and control the pulling procedure, the tarpaulins are transparent.

When the working area is being enclosed, the tarpaulins will be securely fastened and held in position with worked-in belts.

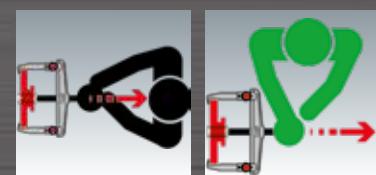

## General safety instructions

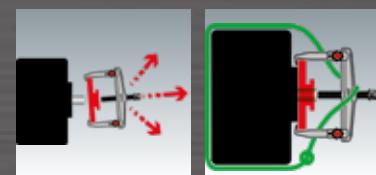

During the pulling procedure as few people as possible should be in the puller's working area.

During the pulling procedure, always position yourself at the side and not in the puller's pulling axis. If the component comes loose abruptly, it can lead to the puller shooting away.

If necessary secure the puller against falling or uncontrolled motion away, after successful loosening of the component, with chain or belt, etc.

In accordance with the UVV (accident-prevention regulations) or country-specific legislation always wear prescribed, personal protective equipment, e.g. safety shoes, helmet, protective goggles, gloves, etc.

# SMALL PULLING PRIMER

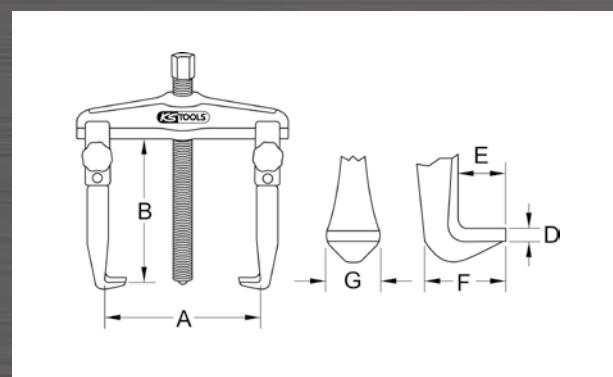

## Selection of the puller according to the work task

Inquire about:

<b>type of component</b>	bearing / belt pulley / gear wheel / bushes etc.
<b>diameter of the component</b>	selection of the work area
<b>pulling depth</b>	selection of the arm length
<b>gripping options on the component</b>	external puller / internal puller / special puller
<b>spatial conditions</b>	standard puller or slim design / 2-arm or 3-arm
<b>support options on the component</b>	on the central axle (spindle) / outside of the housing (bridge yoke) / no support option (slide hammer)

In general, the model determined in this way will exhibit the required characteristics. Regardless of this, however, the largest possible model should always be used as safety must always be paramount here.

Insofar as spatial conditions permit, a three-armed variant should always be preferred to a two-armed variant. Three-armed pullers have a better load distribution of the pulling force than two-armed pullers. This ensures easy, secure and even pulling.

# CORRECT PLACEMENT OF A PULLER

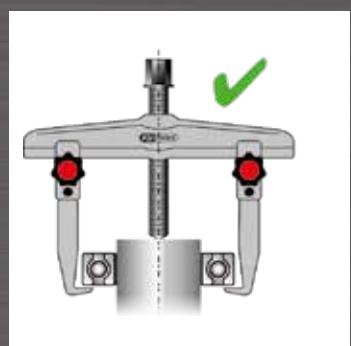

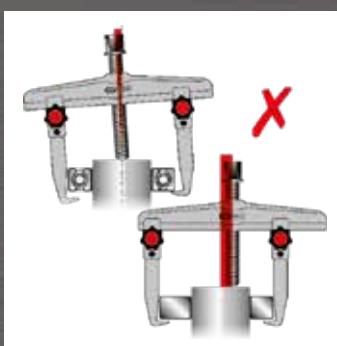

When pulling from belt pulleys, gear wheels, flanges, etc. the puller arm should always be placed as close as possible in the direction of the centre (at the shaft) (between the spokes / at a collar, etc.). With large components in particular the direct application of force in the base area is significantly more effective than on the external diameter and the dimensions of the traverse / arm can be smaller.

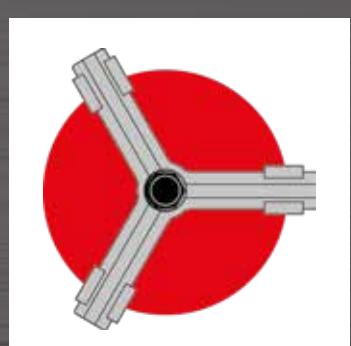

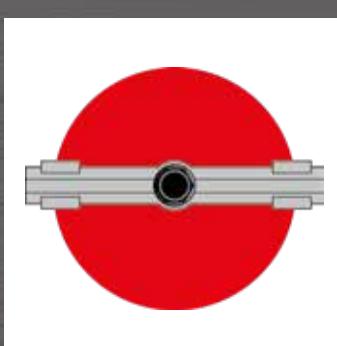

Components lying flush require tapered gripping elements, such as a knife (e.g. slitting knife/internal extractor/separating puller). To ensure the the gripping elements have an optimal and secure fit, after a brief, powerful pull of the working spindle the puller should be loosened again, in order for the clamping element to then be able to clamp again. This allows the gripping elements to get an even better rear grip.

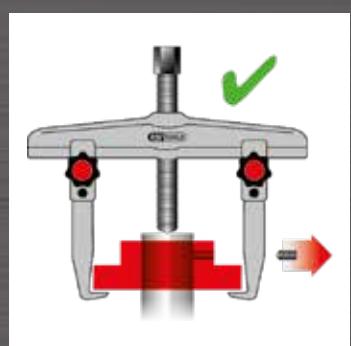

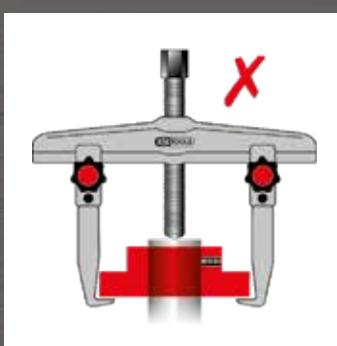

Place the puller arm carefully and ensure that the puller sits precisely in the pulling axis.

Insofar as spatial conditions permit, a three-armed variant should always be preferred over a two-armed variant. Three-armed pullers have a better load distribution of the pulling force than two-armed pullers. This ensures easy, secure and even pulling.

Before the pulling procedure remove everything that would prevent the unobstructed outwards movement of the part to be pulled. (wedges, screws, flanges, nuts, dowel pins, etc.)

# USE OF THE CORRECT DRIVE TOOLS

## Torque wrench

To achieve optimal work results, it is necessary to monitor the application of force to mechanical spindle drives with a suitable torque wrench. On the next page is a table with technical data such as information on the maximum input torque at the drive spindle and the maximum load-bearing capacity of the puller. Note that this input torque is to be measured in such a way that the maximum draw-off strength can be achieved. Therefore avoid extending the drive tools as this may lead to overload and thus to breakage. The torque tools listed below are of matched perfectly in type and design to the usage requirements of all KS Tools pullers and correspond to the DIN EN 6789 standards.

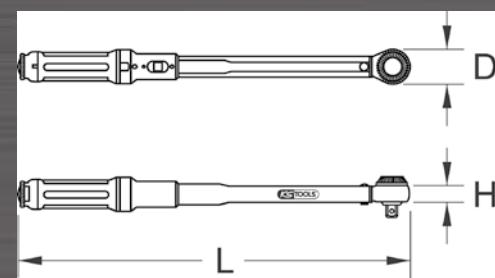

### ERGOTORQUE® precision torque wrench with rotary button reversible ratchet head

- Release accuracy:  $\pm 3\%$  tolerance from set scale value
- Repeat-accurate and precise for at least 5,000 load reversals
- for controlled clockwise and counterclockwise operation
- with ribbed knob at the reversal square for manual pulling
- The direction of operation is changed by reversing the drive square
- Double scale in Nm and lbf·ft division for precise setting
- including finely divisible Nm micrometer scale for fine and precise setting
- large viewing window with magnifying function optimises readability
- clearly audible and palpable torque release through close-gap release
- with robust 30-tooth ratchet mechanism
- Torque-setting quickly and safely by turning the handle
- secure locking option on the handle
- ergonomic and hand-friendly 2-component grip with soft zone
- square drive in accordance with DIN 3120 - ISO 1174 with ball-locking device
- individual series number for clear product identification
- including certificate in accordance with DIN EN ISO 6789:2003 - traceable to national standard

## Handling puller spindles

The overloading of a spindle is under no circumstances dependent on the number of applications and should therefore be avoided by a considered approach in the selection (e.g. dimension) or use.

The foundation for a long working life will already be laid at the time of first use. If work is done here without the lubrication required, it leads quickly to overheating and thus to spindle wear, which naturally has an abrupt negative influence on the working life.

To avoid this:

- Excessive heating, e.g. with a welding torch leads to structural alterations in the spindle material, which will adversely influence characteristics such as breakage resistance and stretchability.
- Ensure that the spindle is precisely positioned in the pulling axis to prevent the spindle suffering from bending stress.
- Introduce work breaks in order to avoid excessive overheating of the spindle, traverse thread or nut.
- Under no circumstances may spindles be operated with electrical or impact wrenches.

Maintenance and care:

- regular cleaning of the spindle with cleaner's solvent, brake cleaner, part-cleaning solution etc.
- After cleaning, lubricate spindle with machine oil
- For conditions of extreme stress the use of a high-performance lubricant is recommended on the stressed spindle parts
- suitable lubricants: See below for high-performance fitting lubricant
- Check spindles regularly for bending by rolling them on a plane surface
- spindles showing significant bending should be replaced

## Special thread compound

This special compound is an outstanding lubricant for static highly-stressed components such as, for example, thread spindles.

Influence factors, e.g. moisture or friction, lead as a rule to increased wear and jamming. Thanks to its special composition and the solids it contains the surface roughness of the surface to be protected is completely filled in. In this way a fully enclosed surface is formed, which significantly reduces friction and offers an effective protection from corrosion.

This increases the working life of the thread spindles substantially and ensures problem-free functioning even at intense heating of up to max. 1200 °C.

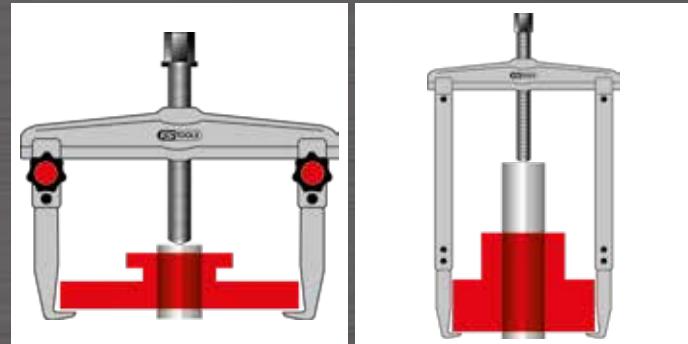

Description		
980.1085	Special thread grease, gun	22
980.1090	Special thread grease, tube	5

# BASIC PULLER VARIANTS AND AREAS OF APPLICATION

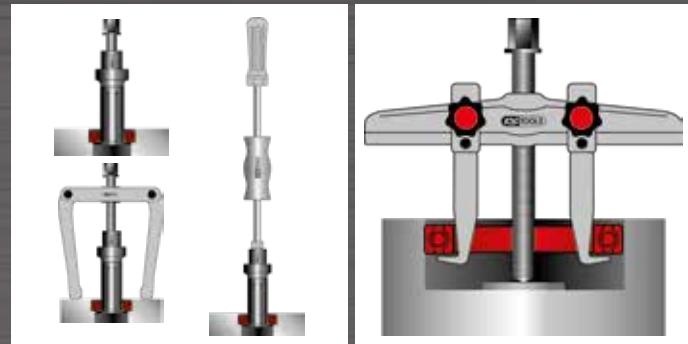

## External pulling

Pulling component of a shaft or axle  
e.g.: Ball bearing, tapered roller bearing, gear wheels, belt pulleys, etc.

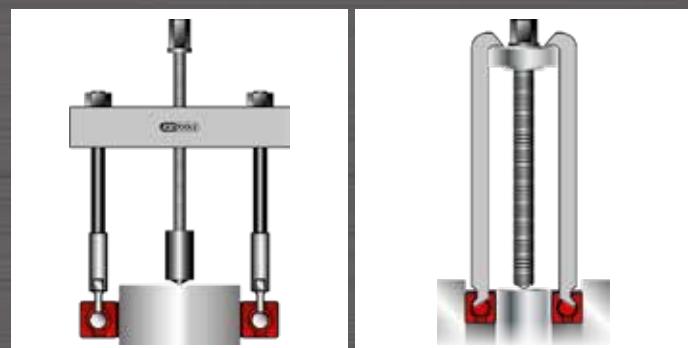

## Internal pulling

Component is in a housing (hole)  
e.g.: Ball bearing, needle bearing, outer bearing ring, bushes, sleeves, etc.

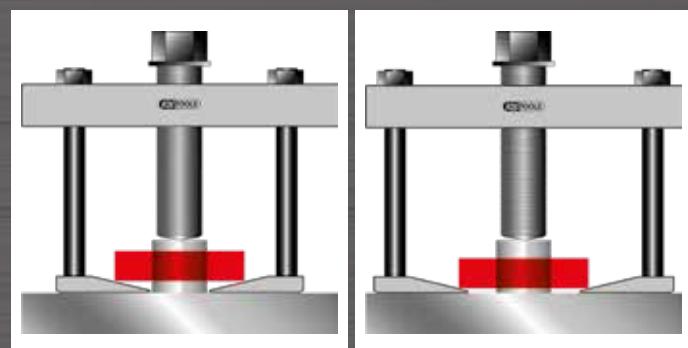

## Extraction and pulling from housings

Component is in the housing and on a shaft or axle  
e.g.: Ball-bearing

## Separator puller

Pull component from a shaft or axle - back is tight or flush on e.g.: Ball bearing, roller bearing, gear wheels, bushes, sleeves, etc.

# SPECIAL PULLER

## Ball bearing extractor

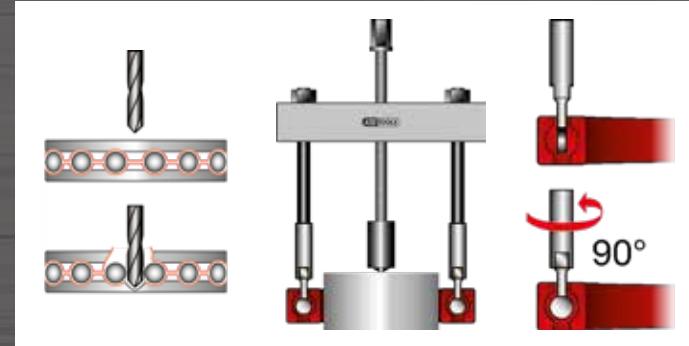

### Application areas:

These special pullers are always used when the ball bearing sits on a shaft and at the same time in a housing and cannot be gripped through the hole either from outside or from inside. Thanks to the slim design lower-lying bearings can also be extracted or pulled.

## Ball bearing extractor (hemisphere)

Work steps:

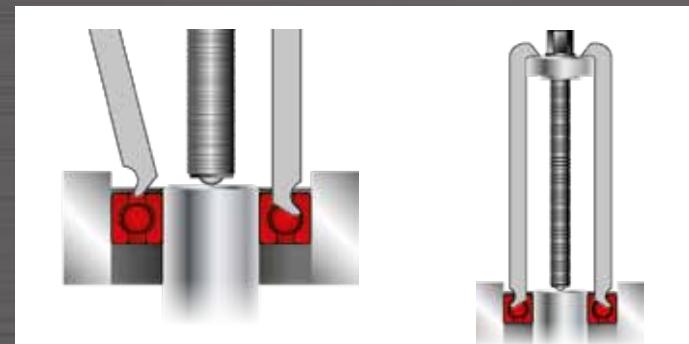

- 1.) Drill bearing cage at two opposite points in each case between two balls
- 2.) Bend cage plate and create space for the hemisphere adapter
- 3.) Position puller with the spindle on the shaft spigot
- 4.) Place appropriate hemisphere into the bearing (ball groove) and turn by 90°
- 5.) By activating the spindle bring the hooks to the pull and extract bearing.

## Ball bearing extractor (claws)

Work steps:

- 1.) Determine the number of ball bearings to be pulled
- 2.) Using the application table (see below) select the right puller with the appropriate claws.  
Tip: If the number of ball bearings to be pulled cannot be defined, the distance between the outer and inner bearing ring is to be measured. When this measurement is rounded to the nearest millimetre, the result is usually the shaft strength of the hook required.
- 3.) Place the hooks as symmetrically as possible after one another with the claws between the balls in the external bearing ring.
- 4.) Position spindle on the shaft spigot of the shaft end and hang hooks on the traverse.
- 5.) By activating the spindle bring the hooks to the pull and extract bearing.

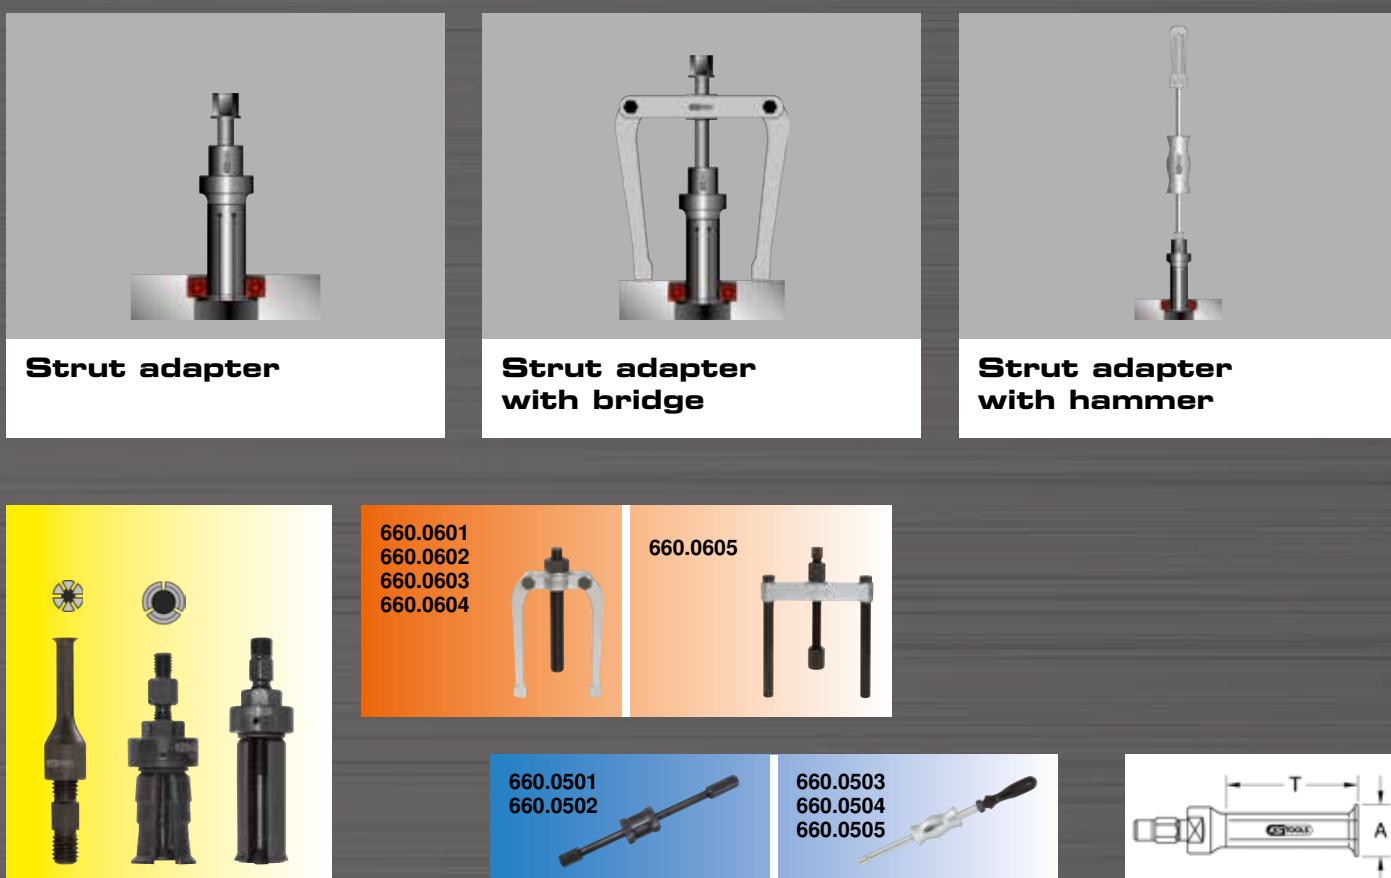

## Application table for 650.0010

Extractor no.	Hook set no.	for ISO ball bearing no.				Extractor no.	Hook set no.	for ISO ball bearing no.			
650.0011	655.0011	6000	6200			650.0013	655.0015		6206		
		6001					655.0016		6207	6305	
		6002				650.0014	655.0015	6009			
		6003					655.0017		6208	6306	
650.0012	655.0012	6004	6201			650.0015	655.0015	6010			
		6005	6202				655.0016	6011

				6304					6212*	6310*	6406*
											6410*

Ball bearing nos. with (\*) are held and pulled with the spacer plates screwed on to the hook base (655.0018). Using 12 screwed-on, folding spacer plates each, the distance between the inner bearing ring and hook base is variably balanced out. Unlisted bearings or special sizes are available on demand.

# STRUCTURE OF A PULLER

## Quick-clamp device

- The quick-clamping device enables tool-free and secure clamping of the arms by hand
- to move - loosen the knurled thumb screws

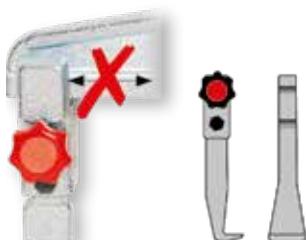

## Hook with stepping

- Hooks can be moved by loosening the upper quick-clamping device

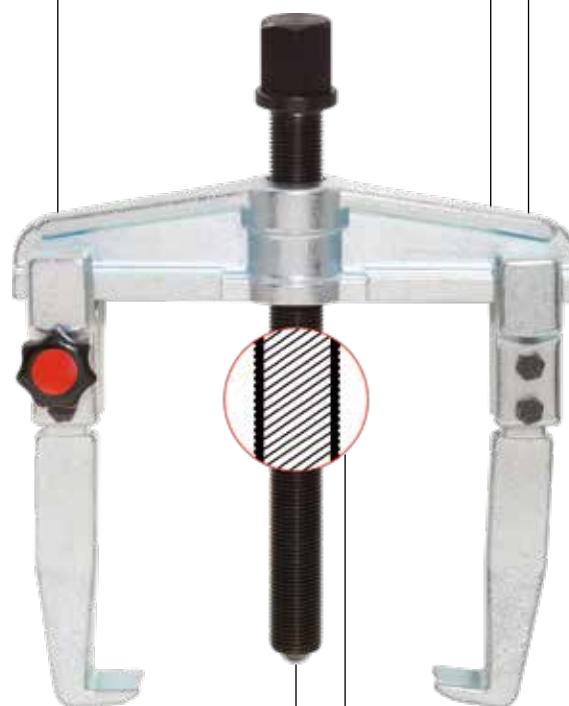

## Standard hook without stepping

- Movement of the hooks by loosening the upper fast-action nut not possible. Here the fast-action nuts and lower nuts need to be loosened.

## Traverse

- Traverse formed from quenched and tempered steel
- precision-milled guides
- designed for the highest stress

## Universal hooks

- Formed from quenched and tempered steel and functional surfaces are precision-milled
- positive and force-closed connection between traverse hooks

## Spindle

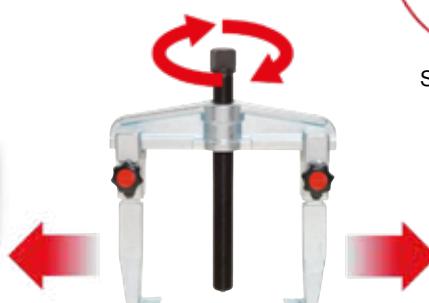

- Turned from quenched and tempered steel
- the thread is rolled and thus has a high stability and precision
- especially wear-resistant, case-hardened spindles, from G1/2" all spindles inductively hardened
- Hex drive with anti-slip device ( collar )

- No wear recognisable
- central pressing of the spindle continues to be guaranteed

## Different pressure peaks

Differences after few work cycles

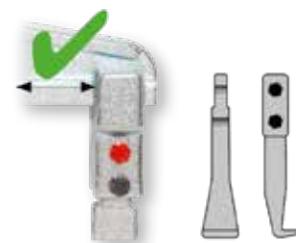

- Jamming in the spindle body
- Deformation of the dead centre
- Pressing the spindle centrally is no longer possible
- Replacement of the spindle required

## Two-screw quick-clamp device

- Using the fixing screws the hooks are braced securely on the traverse. The lower screw forms a positive connection of the adjustable block with the hooks. The upper screw clamps the adjustable block on the traverse.

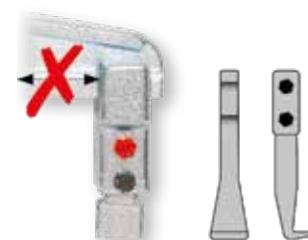

## Hook with stepping

- Hooks can be moved by loosening the upper nut

## Standard hook without stepping

- Movement of the hooks by loosening the upper fast-action nut not possible. Here both nuts must be loosened.

# HYDRAULIC SPINDLES WITH MECHANICAL DRIVE

## Advantages

- low force
- compact form with very high compressive force
- spindle-saving straight-line motion - min. friction at the pressure peaks
- Prevention of turning movement especially with rotating parts
- minimum application of force 60- 70 Nm at maximum output of up to 15t/150KN

### Hydraulic press

- Draw-off strength 8t/80KN or 15t/150KN
- short stroke of 8 or 12 mm
- can be used in conjunction with all mechanical pullers
- used between shaft end and puller spindle
- the use saves the thread of the original puller spindle

### Grease hydraulic spindle short

- Draw-off strength 10t/100KN / 12t/120KN
- short stroke 10 mm
- use in the module system and special pullers with UN support 1-1/2"x16 thread
- pre-tensioning and positioning via the external thread on the cylinder
- the hydraulics are activated with a tommy bar or hex drive of the pressure spindle
- 12t spindle with safety pin

### Grease hydraulic spindle long

- lean form - draw-off strength 12t/120KN or 15t/150KN
- short stroke 12 mm
- use in standard and special pullers with G support 1/2"x14 thread / G 3/4"x14 thread and G 1"x11 thread
- pre-tensioning and positioning via the external thread of the large spindle
- the hydraulics are activated using the small pressure spindle

## Guide on switching to a grease hydraulic spindle long

- Loosen stud
- screw off whole cap (SW large)
- screw spindle body into puller
- screw cap back on up to limit stop
- place stud on again and secure by tightening

#### Working method:

- place on puller
- pre-tension mechanically with large width across flats
- secure puller position sichern
- screw pressure spindle into the press

**Caution:** Power wrench prohibited

- If the piston stroke is not sufficient for loosening, the work step must be repeated. Turn pressure spindle back, pre-tension again mechanically and screw pressure spindle in again

#### Safety note:

- Tighten all screw connections before pulling, as otherwise there is a danger of slipping

# OIL HYDRAULICS

## Advantages

- highest-performance drive form for the use of 10t/100KN up to max. 50t/100KN
- as screw-in / spindle / flat-topped and trunk piston cylinder
- hydraulic pumps optionally as manual / pneumatic or electrical variant
- hydraulic units work very conveniently and with low application of force
- the advantages lie in the long work path (stroke) of the pistons and the extremely high pressure force

## Combination options oil hydraulics with puller

KS Standard hydraulics coupling appropriate for typical systems in the market such as Celette, Enerpac, Sun etc.

All oil hydraulics cylinders can be combined or operated with the following pumps:

**B = Standard/ bar puller**

**L = side plate puller**

**BRS = Standard/ bar puller**  
with radially swivelling arms

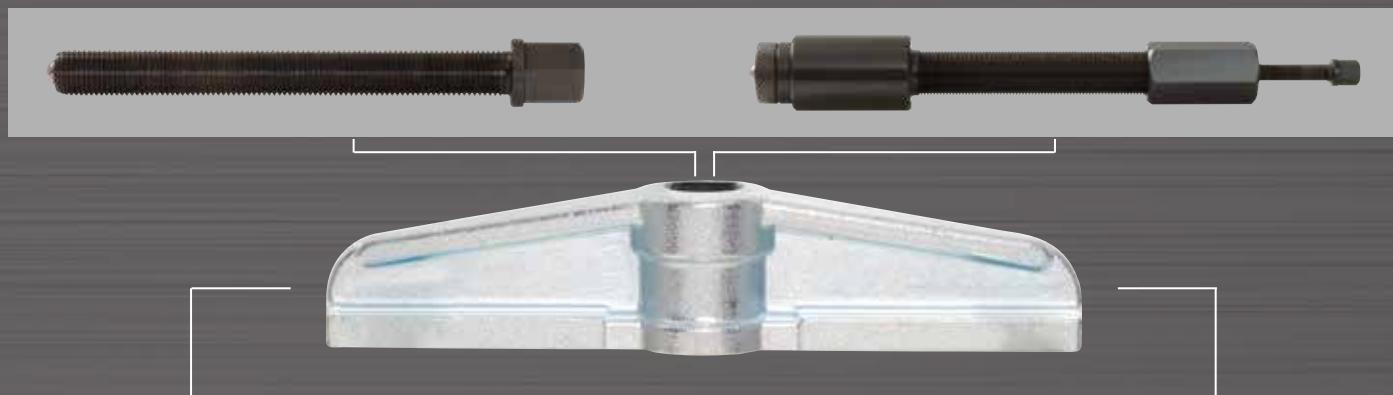

**LRS = side plate puller**  
with radially swivelling arms

## INTERNAL EXTRACTORS SETS

### Precision internal extractor set ø 10,0 - 37,0 mm

- Centering shaft
- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case
- For pulling/hitting the pilot bearing

	kg	€		
660.0011	7 pcs	Precision internal extractor set ø 10,0 - 37,0 mm	2,36	436,50

### Precision internal extractor set ø 10,0 - 45,0 mm

- Centering shaft
- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

consists of:

	kg	€
660.0106	Precision internal extractor, 10-13mm	50
660.0109	Precision internal extractor, 14-19mm	90
660.0114	Precision internal extractor, 20-25mm	110
660.0116	Precision internal extractor, 25-30mm	120
660.0119	Precision internal extractor, 30-37mm	280
660.0122	Precision internal extractor, 38-45mm	290
660.0601	Double ended support for internal extractor, 35-75mm	700

### Precision internal extractor set ø 10,0 - 75,0 mm

- Centering shaft
- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

consists of:

	kg	€		
660.0012	9 pcs	Precision internal extractor set ø 10,0 - 75,0 mm	4,92	647,50

660.0102	Precision internal extractor, 70-115mm	1400	
660.0605	Double ended support for internal extractor, 55-205mm	3800	

## INTERNAL EXTRACTORS & PULLER SETS

### Precision internal extractor and puller set 10 - 45 mm

- Through reversing the arms internal and external applications are possible
- Wide range of arms and hydraulic spindles available
- Centering shaft
- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

			kg	€
660.0022	10 pcs	Precision internal extractor and puller set 10 - 45 mm	5,58	756,50

consists of:

			kg
660.0106	Precision internal extractor, 10-13mm	50	
660.0109	Precision internal extractor, 14-19mm	90	
660.0114	Precision internal extractor, 20-25mm	110

## BALL BEARING EXTRACTORS

### Universal ball bearing extractor set

- Less risk of slippage due to automatically closing pulling arm
- 13 puller variants possible
- Extremely robust spindle with inductively hardened thread
- Excellent power transfer
- Special tool steel
- In durable steel storage case

	kg	€
650.0010	37 pcs	Universal ball bearing extractor set 8,00 <b>959,90</b>

### Universal ball bearing puller set

- For simple and fast removing of ball bearings without removal of the shaft
- Pulling power influences uniformly on the interior and outside ring
- Special tool steel
- In durable plastic storage case
- Suitable for ISO bearings: 6207-6211, 6205-6208, 6303-6305

Ideal for use in SKF, FAG, Timken, NTN bearings etc.  
 Adaptor diameter: 11 - 12.5 - 15 mm

consists of:

	kg	
700.1601	Extension set long, 2 pcs, for 700.1600	204
700.1602	Centre point, for 700.1600	50
700.1603	Tie rod set, 2 pcs, for 700.1600	178
700.1604	Ball head bearing adaptor set, 2 pcs, Ø 11.0 mm	88
700.1605	Ball head bearing adaptor set, 2 pcs, Ø 12.5 mm	96
700.1606	Ball head bearing adaptor set, 2 pcs, Ø 15.0 mm	110
700.1607	Extension set short, 2 pcs, for 700.1600	88
700.1608	U disc for tie rod, pack of 4, for 700.1600	10
700.1609	Spindle, for 700.1600	130
700.1610	Traverse, for 700.1600	345
700.1611	Nut set for tie rod, 2 pcs	10

## BEARING AND BUSH DRIVER

### Brass and aluminium punch

- For extracting bearing, bolts and bushes etc.

## Universal bearing and bush driver set

- for gentle driving of bearing and radial sealing rings
- Universal applicable range
- Can be used manually with a hammer or workshop press
- Applications from 70.0 - 150.0 mm
- Pressure plates are for the two driving spindles
- Special tool steel
- In durable plastic storage case

151.2603	Hexagon key wrench phosphate finish, short, 3mm	10

## POLE TERMINAL EXTRACTOR

### Universal pole terminal and wiper arm puller 2-arm pattern

- 2-jaw
- ideally suited for removing the battery terminal and wiper arms
- Locking handle
- With conical tension screw for proportional tension force distribution
- Self-centring jaw puller
- Extremely robust spindle with inductively hardened thread
- Special tool steel

A mm	B mm	max t mm	D mm	E mm	F mm	G mm	kg	€

## Universal windscreens wiper arm puller set 2/4-jaws

- 2/4-jaws
- each with 2 extra-slim size and pairs of arms with varying width
- Ideally suited to removal of windscreens wiper arms
- Pulling spindle for damage-free support to the rear wiper blades
- Option of working with wide or narrow arms
- Ball bearing mounted centring point
- With narrow socket for tight spaces
- Prevents damage to the bodywork and the windscreens wiper arm
- External drive hexagonal socket 13.0 mm
- Special tool steel

	A mm	B mm	max t mm	D mm	E mm	F mm	G mm	g	€

## UNIVERSAL 2 ARM PULLER SET

### Universal puller set

- Through reversing the arms internal and external applications are possible
- Two armed traverse for 2 or 3 hooks
- Wide range of arms and hydraulic spindles available
- Extremely robust spindle with inductively hardened thread
- Special tool steel

**Application range:** Gear wheels, bearings, pinions, synchroniser hubs etc.

	A mm	B mm	max t mm	max N·m	D mm	kg	€
700.1320	8 pcs	120	260	4,5 80	M14x1,5 x 150	17	3,54

consists of:

	kg	
700.1311	Spindle, M14x1,5	180
700.1312	Two armed traverse	485
700.1321	Draw-off arm, 120mm	260
700.1322	Draw-off arm, 230mm	540
700.1323	Draw-off arm, 280mm	640

## Universal puller set

- Legs double ended usable
- Reception star for 2 or 3 hooks
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

## Quick adjustment universal puller set

- Quick release function
- Ideal for confined spaces
- Through reversing the arms internal and external applications are possible
- Wide range of arms and hydraulic spindles available
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

consists of:

	kg	
700.1100	11 pcs Universal puller set	4,39
700.1120	Mechanical 2 and 3 leg puller, 4"	0,96
700.1130	Mechanical 2 and 3 leg puller, 6"	1,83
700.1140	Bearing splitter, for max. Ø 50 mm	1,15

## Quick adjustment universal puller set

- Quick release function
- Ideal for confined spaces
- Through reversing the arms internal and external applications are possible
- Wide range of arms and hydraulic spindles available
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

## Hydraulic universal 2 + 3 arm puller set

- Less risk of slippage due to automatically closing pulling arm
- 8 length positions possible
- Extremely robust spindle with inductively hardened thread
- Lower power usage
- Special tool steel
- In durable plastic storage case

consists of:

	kg	
620.1701	Quick release universal 2 arm puller	1,00
630.1701	Quick release 3 arm puller	1,30
980.1090	Special thread grease for puller and pusher spindles	0,01

	kg	€
700.1200	22 pcs Hydraulic universal 2 + 3 arm puller set	16,40

## SEPARATOR PULLER TOOL

### Separator puller tool

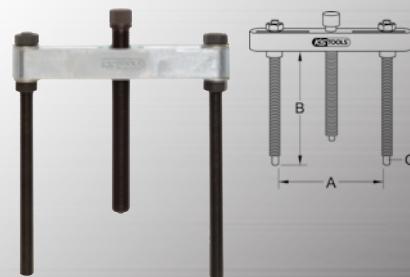

- To be used with separately available separator device
- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel

	A mm	G mm	mm	mm	kg	€
605.0501	5-60	M12	M10 x 120	17	0,40	57,90
605.0502	12-75	M12	M12 x 140	19	0,70	78,50
605.0503	22-115	M16	M16 x 200	24	1,90	114,50
605.0504	25-155	M20	M20 x 250	30	4,20	202,50
605.0505	30-220	M20	M24 x 410	36	12,00	410,90

## SEPARATOR PULLER TOOL SET

### Separator set inclusive with yoke ø 5,0 - 60,0 mm

- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

	kg	€
605.0001	3 pcs	Separator set inclusive with yoke ø 5,0 - 60,0 mm 1,90 173,50

consists of:

	kg	€
605.0501		Bearing separator, 5-60mm 0,40
605.0111		Yoke for bearing separator tool, 40-115mm 0,80
605.0401		Extension for pull rod M12 x100mm 0,20

### Separator set inclusive with yoke ø 22,0 - 115,0 mm

- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Hydraulic thrust spindle available
- Special tool steel
- In durable plastic storage case

	kg	€
605.0003	3 pcs	Separator set inclusive with yoke ø 22,0 - 115,0 mm 6,10 339,50

consists of:

	kg	€
605.0503		Separator puller tool, 22-115mm 1,90
605.0113		Yoke for bearing separator tool, 55-205mm 2,70
605.0403		Extension for pressure rod, M16 x100mm 0,40

### Separator set inclusive with yoke ø 12,0 - 75,0 mm

- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Special tool steel
- In durable plastic storage case

	kg	€
605.0002	3 pcs	Separator set inclusive with yoke ø 12,0 - 75,0 mm 2,40 232,50

consists of:

	kg	€
605.0502		Separator puller tool, 12-75mm 0,70
605.0112		Yoke for bearing separator tool, 45-140mm 1,10
605.0402		Extension for pressure rod, M12 x100mm 0,20

### Separator set inclusive with yoke ø 25,0 - 155,0 mm

- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Hydraulic thrust spindle available
- Special tool steel
- In durable plastic storage case

	kg	€
605.0004	3 pcs	Separator set inclusive with yoke ø 25,0 - 155,0 mm 11,48 499,90

consists of:

	kg	€
605.0504		Separator puller tool, 25-155mm 4,20
605.0114		Yoke for bearing separator tool, 90-260mm 5,20
605.0404		Extension for pressure rod, M20 x 1,5 x 100mm 0,70

## Separator set inclusive with yoke ø 30,0 - 220,0 mm

- For the removal of secure bearings and bushes
- Extremely robust spindle with inductively hardened thread
- Hydraulic thrust spindle available
- Special tool steel
- In durable steel storage case

	M	€
605.0005	3 pcs Separator set inclusive with yoke ø 30,0 - 220,0 mm	29,00 1139,50

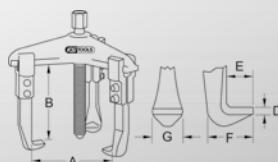

consists of:

	M	€
605.005	Separator puller tool, 30-220mm	12,00
605.0115	Yoke for bearing separator tool, 100-360mm	8,80
605.0405	Extension for pull rod, M20 x 1,5 x 100mm	0,70

## UNIVERSAL 3 ARM PULLER, HEAVY EXECUTION

### Universal 3 arm puller

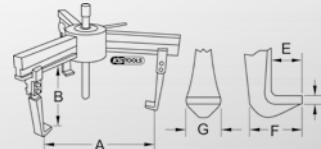

- extremely robust design
- Uniform load distribution and centered tightening
- Through reversing the arms internal and external applications are possible
- Wide range of arms and hydraulic spindles available
- Extremely robust spindle with inductively hardened thread
- Special tool steel

	A	B	C	max	D	E	F	G	M	€
630.0012	100-	200	210-	410	15	G1x11 x310	36	5	25	54 35 21,00 924,50

### Universal 3 arm puller, heavy execution

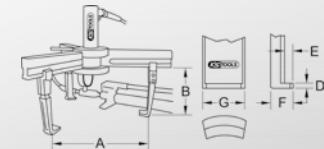

- extremely robust design for extreme loads
- Uniform load distribution and centered tightening
- Through reversing the arms internal and external applications are possible
- Different leg variants available
- Includes hydraulic thrust spindle
- Lower power usage
- Special tool steel

	A	B	C	max	D	E	F	G	M	€
630.0023	100-	185	240-	410	15	M14x1,5 x100	17	5	25	54 35 22,00 1286,50

### Universal 3 arm puller for using with hydraulic cylinder

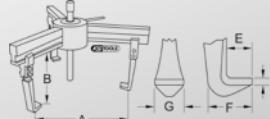

- Consists of traverse and legs
- Traverse arm radial revolving and interchangeable
- Uniform load distribution and centered tightening
- Without hydraulic compression spindle / without hydraulic cylinder
- Without hydraulic pump
- Special tool steel

	A	B	C	max	D	E	F	G	M	€
640.2315	150-700	200	M68x2	15	10	33	55	50	38,00	1429,50

# STRUCTURE OF A PULLER

## Quick-clamp device

- The quick-clamping device enables tool-free and secure clamping of the arms by hand
- to move - loosen the knurled thumb screws

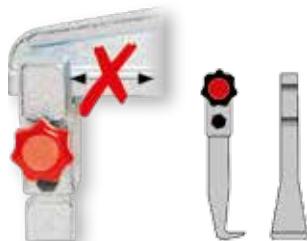

## Hook with stepping

- Hooks can be moved by loosening the upper quick-clamping device

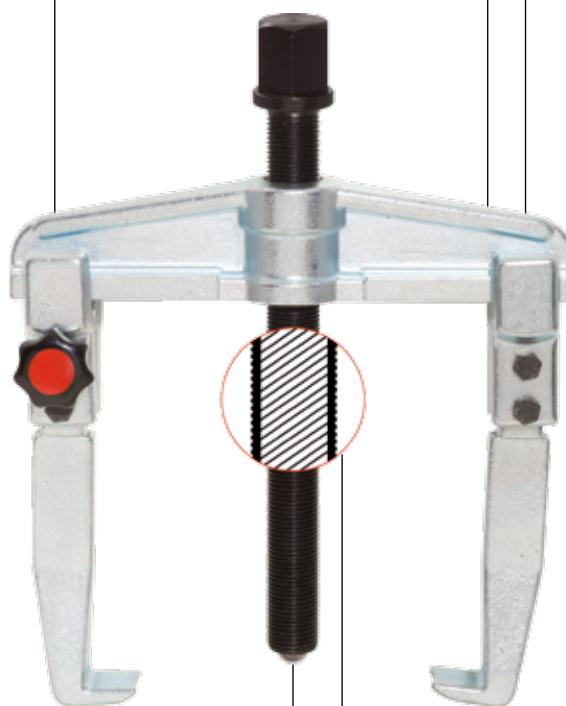

## Standard hook without stepping

- Movement of the hooks by loosening the upper fast-action nut not possible. Here the fast-action nuts and lower nuts need to be loosened.

## Traverse

- Traverse formed from quenched and tempered steel
- precision-milled guides
- designed for the highest stress

## Universal hooks

- Formed from quenched and tempered steel and functional surfaces are precision-milled
- positive and force-closed connection between traverse hooks

## Spindle

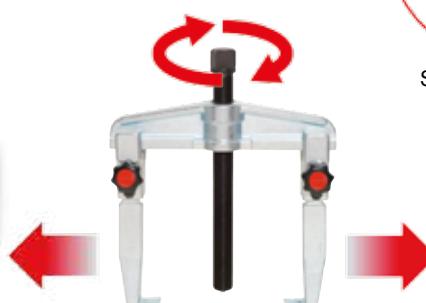

- Turned from quenched and tempered steel
- the thread is rolled and thus has a high stability and precision
- especially wear-resistant, case-hardened spindles, from G1/2" all spindles inductively hardened
- Hex drive with anti-slip device ( collar )

- No wear recognisable
- central pressing of the spindle continues to be guaranteed

## Different pressure peaks

Differences after few work cycles

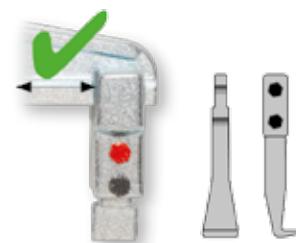

## Two-screw quick-clamp device

- Using the fixing screws the hooks are braced securely on the traverse. The lower screw forms a positive connection of the adjustable block with the hooks. The upper screw clamps the adjustable block on the traverse.

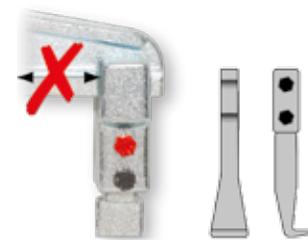

## Hook with stepping

- Hooks can be moved by loosening the upper nut

## Standard hook without stepping

- Movement of the hooks by loosening the upper fast-action nut not possible. Here both nuts must be loosened.

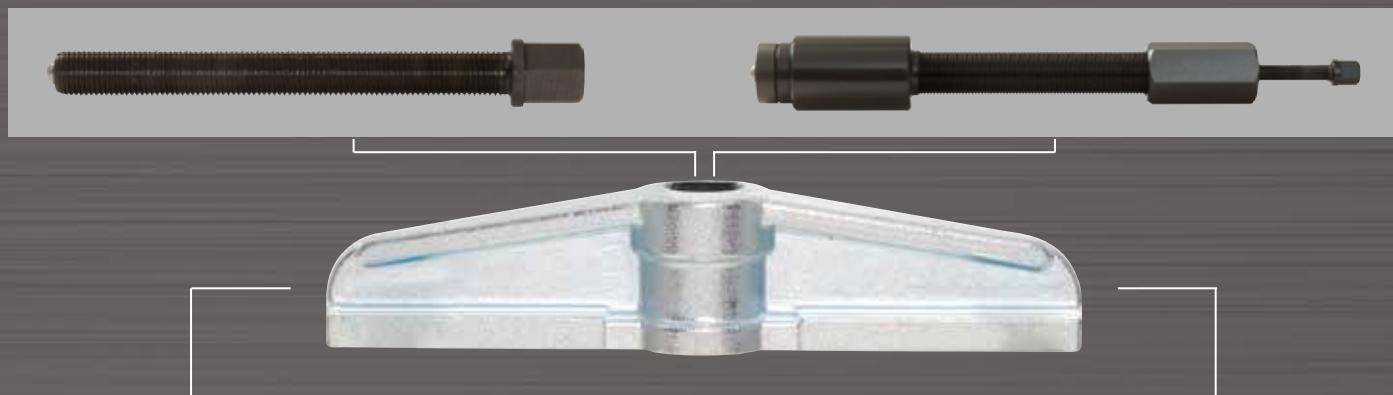

- Jamming in the spindle body
- Deformation of the dead centre
- Pressing the spindle centrally is no longer possible
- Replacement of the spindle required

# COMBINATION OPTIONS FOR STANDARD / BAR PULLER

## Mechanical spindle

## Hydraulic spindle

### Hooks with quick-clamping device

Standard	Slim design

Caution: The hooks marked in red are not the original hooks relating to the pullers indicated, but can be used in these.

## ACCESSORIES

### Quick adjustment puller legs

- Quick release function
- For 2 arm and 3 arm pullers
- Special tool steel

	B mm	D mm	E mm	F mm	G mm	g	€
615.1101	100	3	13	25	20	200	20,50
615.1102	150	4	16	35	25	700	36,50
615.1103	200	3	13	25	20	500	27,90

### Quick adjustment puller legs, extremely narrow design

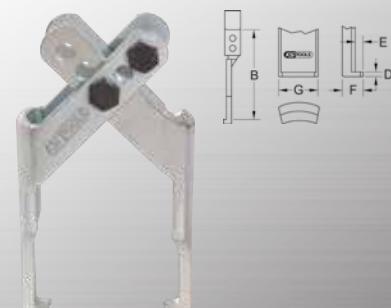

- Quick release function
- Ideal for confined spaces
- For 2 arm and 3 arm pullers
- Special tool steel

## Special thread grease for puller and pusher spindles and nuts subjected high loads

- Lubricant for components subjected to high static loads, e.g. threaded spindles
- Prevents excessive wear and seizing
- Irregularities in the surface to be protected are completely filled
- Minimises the friction thanks to the closed surface
- Effective protection against corrosion
- Increases the service life of threaded spindles
- Ensures reliable function even at high temperatures up to max. 1200°C

	kg	€

### HYDRAULIC HAND PUMP

#### Hydraulic hand pump

- Single stage
- Reverse valve for advance and return stroke
- Safety valve for overload protection
- Includes pressure tube 1.8 meters
- Usable tank volume 2081cm<sup>3</sup> = 2.081l

	L mm	B mm	H mm	Flow rate per hub cm <sup>3</sup>	G max	t kg	€

640.0030	3/8" - 18 NPT	244	244	362	14,00	14,00	5878,50

### Pneumatic hydraulic pump

- Pneumatic working
- For simply agent press cylinders
- Safety valve for overload protection
- Includes pressure tube 1.8 meters
- Usable tank volume 2081cm<sup>3</sup> = 2.081l
- Operating pressure max. 700 bar
- Output per stroke:
  - 0.8 l/min up to 200 bar
  - 0.1 l/min up to 700 bar

### Electric hydraulic pump

- Two stepped for simply agent press cylinders
- Safety valve for overload protection
- Usable tank volume 1900 cm<sup>3</sup> = 1.9l
- Includes pressure tube 1.8 meters
- Motor specification 0.37kW - 220/230 V - 50/60 hertz, single phase (3.2 amps)
- 1. Step: max. 13 bar
- 2. Step: max. 700 bar
- Output per stroke:
  - 1. Step: 3.31 l/min
  - 2. Step: 0.32 l/min

## UNIVERSAL BELT PULLER

### Universal belt pulley puller 3 arm

- For the damage free drawing off of pulley belts
- Universal suitable for several diameters and different hole divisions
- Less space requirement through compact method of building
- Suited for work on engines in the vehicle or removed
- Special tool steel

	A mm	B mm	max t mm	D mm	E mm	F mm	G mm	€

## STEERING WHEEL PULLER

### Universal steering wheel puller 2 arm for passenger cars

- Suitable for quick, clean and damage-free removal of the steering wheel
- Short and long hooks as well as pressure piece for spindle
- Suitable for universal use due to longitudinal grooves in the puller bridge
- Extremely robust spindle with inductively hardened thread
- Special tool steel

## WINDSCREEN WIPER ARM PULLER

### Universal windscreen wiper arm puller with fork

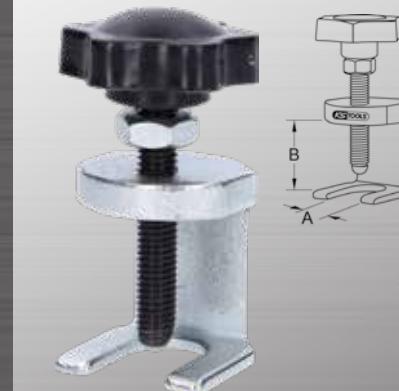

- With pulling yoke
- Ideally suited to the protective removal of windscreen wiper arms
- Pulling spindle with brass cap for damage-free support on the washer arm shaft
- Extremely robust spindle with inductively hardened thread
- Spindle guidance is carried out in a moving sleeve
- Prevents damage to the bodywork and the windscreen wiper arm
- With narrow socket for tight spaces
- Special tool steel

## Universal windscreen wiper arm puller set

- Ideally suited to disassembly of windscreen wiper arms
- Includes impact hammer puller
- Universally fitting puller set suitable for approx. 450 windscreens wipers, 300 vehicles and 30 car brands
- Self-stiffening or recessed built-in washer arms are quickly disassembled with this set
- Alternatively can be used mechanically or with an impact spindle
- Prevents damage to the bodywork and the windscreens wiper arm
- Special tool steel
- In durable plastic storage case

	A mm	B mm	mm	mm	kg	€
700.1240	13	pcs	Universal windscreen wiper arm puller set	3,81	276,50

700.1400-2	Disc traverse, 100mm	0,92	
700.1400-3	Puller pull arm set, 5 pcs	0,50	
700.1400-4	Impact socket 30mm, L=200mm	0,94	
700.1400-5	Impact spindle	2,02	
700.1400-7	Extension small	0,06	

## Wheel hub and bearing dismantling set

- Special tool for expressing the joint hubs or drawing off of the wheel hub
- Massive tool, made out of a one piece
- Special tool steel

					€
700.1410	7 pcs	Wheel hub and bearing dismantling set	4,80	353,50	

consists of:

					€
700.1400-1	Hydraulic spindle 10 t, AG 1.1/2" x 16G		1,34		
700.1411	Wheel hub puller without spindle		2,55		
700.1412	Conical ring set, 5 pcs		0,15		

## DRAW OFF LINING

### Draw off lining

- For drawing off the shoulder housings interior ring of light machines, motor parts and other machine parts
- Special tool steel

	Ø mm	L mm	max N·m	mm	mm	kg	€
670.0221	5-32	135	60	17	M14x1,5 x 130	1,40	194,90

## STUD BOLT PULLER

### Stud bolt puller

- For screwing in or extracting out stud bolts
- Right and left hand clamping function
- also for lengthy stud bolts
- Special tool steel

	Ø mm	max N·m	●	kg	€
670.0231	5 - 15	120	19 mm	360	41,90
670.0232	10 - 19	120	19 mm	400	49,50
670.0233	18 - 28	120	19 mm	450	59,90

### Stud bolt puller

- For screwing in or extracting out stud bolts
- Right and left clamping function
- also for lengthy stud bolts
- Special tool steel

	Ø mm	max N·m	●	kg	€
670.0241	5 - 20	120	19 mm	400	72,90

### Stud bolt puller

- External hexagon drive
- With right and left hand clamping function
- Safe clamping due to 3 rollers
- Stud screws can be screwed in or out without using counter nuts on the bolt
- Also for extra long studs that will go through the through socket
- Mirror polished
- Chrome vanadium

### Eccentric clamping and turning device

- For the removal and rotation of the round or hexagonal track rod joints (steering and wheel end)
- Due to the knurled eccentric cam it allows from optimal grip even at the joints without drive (round)
- For use on the workbench or directly on the vehicle
- Additional stopper prevents slipping during the splitting process
- Special tool steel

	Ø mm	Ø mm	●	kg	€
150.1640	23-45	31-35	300		86,90

### Screw bolt puller set

- Square drive adaptor to DIN 3120 / ISO 1174 with ball lock
- External drive hexagonal socket 21,0 mm
- With right and left hand clamping function
- Safe clamping due to 3 rollers
- allows quick and effortless insertion and removal of studs, dowel screws, threaded rods etc.
- Stud screws can be screwed in or out without using counter nuts on the bolt
- Also for extra long studs that will go through the through socket
- Mirror polished
- Chrome vanadium
- In durable plastic storage case

### Eccentric clamping and turning device

- For the removal and rotation of the round or hexagonal track rod joints (steering and wheel end)
- Due to the knurled eccentric cam it allows from optimal grip even at the joints without drive (round)
- For use on the workbench or directly on the vehicle
- Additional stopper prevents slipping during the splitting process

## Screw extractor set

- For screws from M3 - M18
- Enable the loosening of screws and bolts with turned off heads
- Conical tapered spiral
- In durable plastic case

		kg	€
150.1330	6 pcs	M3-M6 - M6-M8 - M8-M11 - M11-M14 - M14-M18 - M18-M24	64 <b>16,90</b>

## NUT SPLITTER

### Mechanical nut splitter set

- For splashing on tight and overtightened nuts without damaging the threaded bolt
- Suitable for nuts to a tensile strength class 6
- Special tool steel

		kg	€
700.1180	4 pcs	Mechanical nut splitter set	1,58 <b>195,90</b>

consists of:

		kg	€
700.1181	Nut splitter 9 - 12 mm, drive 12 mm	90	
700.1182	Nut splitter 12 - 16 mm, drive 14 mm	170	
700.1183	Nut splitter 16 - 22 mm, drive 19 mm	380	
700.1184	Nut splitter 22 - 27 mm, drive 21 mm	660	

### Hydraulic nut splitter set

- For splashing on tight and overtightened nuts without damaging the threaded bolt
- Working range 7.0 - 36. mm
- Induction hardened in the cutting area
- Suitable for nuts to a tensile strength class 10
- Excellent power transfer
- Special tool steel
- In durable plastic storage case

		kg	€
700.1170	7 pcs	Hydraulic nut splitter set	5,00 <b>306,50</b>

consists of:

		kg	€
700.1150	Hydraulic nut splitter 7.0 - 21.0 mm	700	
700.1163	Nut splitter	3600	
700.1151	Replacement chisel small	50	
700.1152	Replacement plate small	50	
700.1161	Replacement chisel large	100	
700.1162	Replacement plate large	100	
151.2073	Hexagon key 3/8" for replacement plate large	110	

### Hydraulic nut splitter

- Small execution
- Suitable for nuts to a tensile strength class 10
- Work pressure max. 5 t
- Suitable for narrow spaces

	mm	L mm	kg	€
700.1150	7-21	210,0	700	<b>85,50</b>

### Hydraulic nut splitter

- Small execution
- Suitable for nuts to a tensile strength class 10
- Compressive force max. 15 t
- Suitable for narrow spaces
- Exchangeable chisel

	mm	Length mm	kg	€
630.0022	22-36	290,0	2,90	<b>953,50</b>

### Hydraulic nut splitter set

- Large execution
- Suitable for nuts to a tensile strength class 10
- Work pressure max. 13 t
- In durable plastic storage case

		kg	€
700.1160	4 pcs   22 - 36 mm; M14 - M24	3,80	<b>194,90</b>

consists of:

		kg	€
700.1161	Replacement chisel large	100	
700.1162	Replacement plate large	100	
700.1163	Nut splitter	3600	
151.2073	Hexagon key 3/8" for replacement plate large	110	

**700.1200****Hydraulic universal 2 + 3 arm puller set**

- Less risk of slippage due to automatically closing pulling arm
- 8 length positions possible
- Extremely robust spindle with inductively hardened thread
- Lower power usage
- Special tool steel

**304,90\*** €**700.1300****Universal 2 + 3 arm puller set**

- Slim hooks
- Ideal for confined spaces
- Through reversing the arms internal and external applications are possible
- Wide range of arms and hydraulic spindles available
- Extremely robust spindle with inductively hardened thread

**298,50\*** €
